

CARITAS BABY HOSPITAL

Bethlehem, Palestine

Date: 2008-2011
Type: Hospital
Client: Kinderhilfe, Switzerland
Area: 5,000 m²
Status: under execution

The outpatient clinic volume concept completed the existing buildings, as a missing puzzle piece, and is integrated in its environment.

It consists of overlapping stone cubes, taking into consideration the existing environment and context. The new addition is dissimulated in the existing volume and no distinction can be seen between new and old structures.

All public functions are situated on the ground floor level, and are completely exposed through the transparent facades.

The inside was treated as an open space outpatient clinic, interacting with the patios, terraces and gardens.

A central bay station insures the functionality and the easy flow of patients and the linking to the diagnostic center.

AAU is currently managing the construction site of a 2,400 sqm foreign staff residential building at the hospital compound.
